FOR CA FIRMS · SURAT

KnowledgeHub AI

Client bills in. Checked data out.

Prepared for: _____ Date: _____

A wrong invoice total caught before it reaches the books.

In one line

KnowledgeHub AI reads your clients' purchase invoices (PDFs, scans and WhatsApp photos), checks them against your rules, and gives your team one review screen where nothing goes out unapproved, with every correction recorded.

The month-end problem

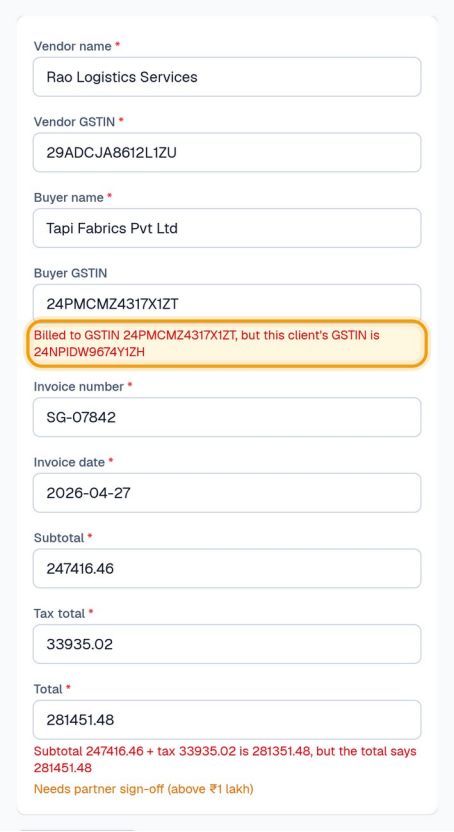

- **Bills arrive everywhere:** WhatsApp photos, emails, PDFs and paper, often at month-end.
- **Typed in by hand:** vendor, GSTIN, invoice number and amounts, client after client.
- **Mistakes found late:** wrong totals, invalid GSTINs, the same bill entered twice.
- **Deadlines don't move:** GSTR-1 on the 11th, GSTR-3B on the 20th.

How it works

Step	What happens
1 Upload	PDFs, scans, DOCX and phone photos. Merge, split, keep pages or rotate without other software.
2 Read	OCR and an invoice reader fill in vendor, GSTINs, invoice number, date and amounts.
3 Check	Your validation rules, set per client, flag problems as errors or warnings.
4 Review	Your team compares each invoice with the original and fixes anything. Every change is recorded.
5 Approve	Only invoices without errors can be approved.
6 Export	Approved invoices to Excel, with real numbers and dates (Tally export in development).

What it checks

Check	What it catches	Default
GSTIN is valid	Wrong format or check digit, e.g. OCR reading 0 as O	Error
Total = subtotal + tax	Totals that don't add up (₹1 round-off allowed)	Error
Duplicate invoice	Same vendor GSTIN and invoice number, even PDF vs photo	Error
Tax rate plausible	Tax above the expected share of the subtotal	Warning
Billed to this client	Bills carrying another GSTIN than the client's	Optional
Invoice date checks	Future dates, or bills older than a set number of days	Optional
Large amount	Totals above your threshold	Optional
Your own rules	If [field] [condition] [value] → error or warning, with your message	Optional

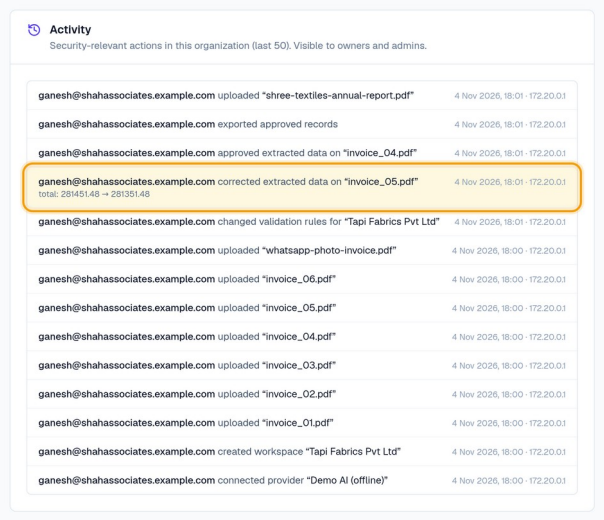

Right client name, wrong GSTIN: flagged by the 'Billed to this client' rule.

Also included

- **PDF tools:** merge, split into one document per page, keep selected pages, rotate. Originals never change.
- **Ask your documents:** plain-language questions, answered only from the client's documents, with the source page.
- **Team and roles:** owner, admin and member; each client in its own workspace.

Your clients' data

- **Separated:** each firm and each client is fully separated from every other.
- **Recorded:** logins, uploads, corrections (old → new value), approvals and exports, with time and user.
- **Private:** documents stay in the platform; AI provider keys are encrypted and never shown again.
- **Honest status:** no formal security certification yet.

Activity log: every action recorded, including corrected figures.

Founding-firm pilot proposal

	Proposal
Duration	2 weeks
Scope	Your real purchase invoices, up to 300
We do	Set up your clients, rules and team; support in person in Surat
Success means	90–95% or more of fields correct on readable invoices, and less time per invoice than today (measured before the pilot starts)
You give	Weekly feedback, and a testimonial if it works
Price	No charge for founding firms

> **First step**
>
> Share 50–100 of last month's purchase bills. We'll show you the results on your own data.

What we're building next

You decide the order:

- **Tax breakdown:** line items, HSN, CGST/SGST/IGST and rate checks.
- **Tally export:** Tally-importable vouchers with ledger mapping per client.
- **GSTR-2B reconciliation:** matched, amount differs, missing in 2B (credit at risk), missing in books.
- **Faster bill collection:** WhatsApp/email inbox, monthly checklist per client, reminders.
